## Mechanical Splice

# Mechanical Splice Unit

Single fiber Mechanical Splice

## Features

Mechanical splice connection makes use of mechanical splice unit where 2 fibers are first inserted into the unit. The fibers are next aligned and then held in position by clamping parts.

- Fast and Easy splicing of 250 or 900um SM/MM fibers.
- Power source not required, all necessary tools are provided in the standard tool kit.
- Much faster compared to fusion splicing method

## Structure

Mechanical splice connection is done by using the mechanical splice shown in Figure 1. Fibers are set to the V-groove of the mechanical splice. The fibers are held in place by clamping with the clamping parts. Index matching gel is added to the center of the mechanical splice (at the supposed connection point of the two fibers) to ensure good insertion and return loss.

Figure 2 and Figure 3 show the inner structure of the mechanical splice. Both the 0.25mm section and 0.125mm (bare fiber) section of the fiber are being clamped and held in position. Therefore, to ensure good connection, both the fiber stripping length and the fiber cleaved length must be controlled within specifications.

## FAST-Connector

## FAST-Connector (UNI) Series (for 250um, 900um fiber)

Before Assemble

After Assemble

Fujikura has greatly simplified process of joining two fibers, therefore providing significant support for our customers in the construction of FTTH network. Fujikura FAST connector is a series of field-installable connectors, which require no polishing. Unlike conventional field-installable connectors, FAST connector series do not employ assembling tool but incorporate its own pre-assembled wedge launcher. The pre-assembled wedge launcher is a disposal part after installing fiber. Fujikura FAST connector uses a mechanism of "Push-pull-wedge", which has been introduced by Fujikura's Mechanical Splices. As the "Push-pull-wedge" mechanism achieves clamping both bare fiber part and coating part, this clamping mechanism enhances strength against fiber twist.

## Features

FAST-SC-UNI, FAST-LC-UNI has own design to clamp 250um and 900um coated fibers. Both are fully compatible with the standard SC, LC connectors and demonstrate the performance combining SC, LC connectors and Mechanical Splices.
